

Onboarding Handout — Getting Registered & Connected

Part 1 of the briefing (11:30 – 11:45). By the end you'll be verified, on a team, with your GitHub repo wired up so every push is built and scored.

The flow at a glance

```
Scan QR → Google Form      (name, email, GitHub repo link)
  → we allowlist every email in one shot
  → register on the dashboard with the SAME email
  → click the verification link, log in
  → create (or join) your team
  → team leader gets a webhook-setup email
  → add the webhook + (private repos) add the bot collaborator
  → we confirm pushes are flowing
```

Support & resources — Slack: join the contest channel at https://join.slack.com/t/hpen-bibi-2026/shared_invite/zt-40amlsjo7-cW6mR8Vbvv8XVDDdVWnUPg — the problem statement, all resources, and live help are posted there. It's your main support channel, **especially during the remote Build-It day** (you can also catch organizers in person on Break-It day in Meeting Room 3).

Step 1 — Scan the QR and fill the Google Form

- Scan the **QR code** we display — it opens a short **Google Form**. Or open it directly: https://docs.google.com/forms/d/e/1FAIpQLSd60i9d64THQzoyntpQjVthurM-BL_AJtl4BSfWQ1qkECF6GA/viewform (it's also posted in the #bibi-contest-materials Slack channel).

- Enter your **name**, your **email**, and your **GitHub repository link**.
- **No repo yet?** Create one on GitHub now (a **private** repo is fine) and paste its URL.
- Use an **email you can check during the session** — you'll verify it shortly.

Step 2 — We allowlist everyone (one shot)

- After the form closes, the organizers **bulk-allowlist every submitted email** at once.
- You can only register with an **allowlisted** email, so registration effectively opens for everyone together. Give us a moment after the form closes.

Step 3 — Register on the dashboard

- Go to <https://hpen-bibi.com> and register with the **same email you put in the form**.
- Your **username can be anything** — it does **not** have to match anything.
- Choose a password.

Step 4 — Verify your email (*don't skip*)

- Open your inbox and **click the verification link**, then **log in**.
- **Until your email is verified you cannot create or join a team.** This is the most common place people get stuck.
- No email after a minute or two? Check spam; if it's still missing, tell an organizer.

Step 5 — Create or join your team

- Once verified and logged in, **create a team** (or join a teammate's), then **sign your team up for the contest**.
- **Who creates the team matters:** the teammate who filled out the form (the one whose **GitHub repo link** we have) should be the one to **create** the team. They become the **team leader** and will receive

the webhook-setup email.

Step 6 — Set up your webhook (from the email)

Once your team exists, the **team leader receives an email** with your team's **unique webhook details**. In your GitHub repo:

1. **Add the push webhook** — *Settings* → *Webhooks* → *Add webhook*:

- **Payload URL:** the one in the email
- **Content type:** `application/json`
- **Secret:** the one in the email
- **SSL verification:** enabled
- **Which events:** *Just the push event*
- **Active:** checked

2. **If your repository is private**, add the contest bot `hpe-bibi-runner` as a **read collaborator** (*Settings* → *Collaborators*) so we can fetch your pushed commits.

3. **Push** to your default branch.

Step 7 — We confirm you're wired up

- On our end we check that pushes flow **GitHub** → **contest** → **build/score** and that your webhook + access are correct. Once that's green, you're ready to build.

Repo layout (where things go)

```
your-repo/  
  build/          # your stor implementation (make here → ./stor)  
  break/<name>/   # your break test cases (test.json + description.txt)
```

Onboarding checklist

- Filled the Google Form (name, email, GitHub repo link)
- Registered at <https://hpen-bibi.com> with the **same email**
- Clicked the email verification link and logged in
- Created/joined a team **and** signed the team up for the contest
- (Leader) received the webhook email and added the push webhook
- (Private repo) added `hpe-bibi-runner` as a read collaborator
- Pushed a first commit

Troubleshooting

Symptom	Likely cause / fix
"Email not recognized" at registration	Email not allowlisted yet, or it doesn't match the form — use the exact address you submitted; ask an organizer.
Can't create/join a team	Email not verified yet — click the link in your inbox.
No webhook email	Your team may not be created yet, or the form-filler didn't create the team. The email goes to the team leader .
Pushes don't get built	Webhook misconfigured (wrong URL/secret, not subscribed to <i>push</i> , wrong content type), or — for a private repo — the bot isn't a collaborator yet.
No verification email	Check spam; confirm the email matches the form; ask an organizer.
